

MEDICINE AND CARE ON THE MOVE

iMedOne® Mobile – The app for your hospital information system

With mobile applications and by using smartphones and tablet PCs you can optimize work processes at your hospital. Ease the burden on doctors and nurses and enhance the quality of the care you provide for your patients at the same time.

HEALTHCARE SOLUTIONS

MOBILE WORK IMPROVES DAY-TO-DAY HOSPITAL PROCESSES

THE COMPLETE PATIENT FILE IN YOUR WHITE COAT POCKET

Instead of carrying heavy paper files around the wards, clinic staff can access patients' entire files by smartphone and tablet PC. Irrespective of time and place they can access on screen data such as X-rays, laboratory findings or courses of treatment and discuss them directly with colleagues or the patient. The latest changes in the course of the patient's disease can be checked without the time-consuming process of having to go to a desk for the records. Your staff can put their working time to more effective use and will have more time to devote to treating the patients.

MANAGE AND BILL TREATMENT SPECIFICALLY

With easy-to-use apps your physicians have full control over the course of treatment. Purchase orders can be sent to service facilities and approved in accordance with the user's authorization. Medications can also be prescribed or discontinued via systems put in place to ensure the safety of prescribed medicines. Your staff will constantly be able to track the progress of an order and on its completion to access findings directly. The chain of communication is thereby secured both at your clinic and externally.

DOCUMENTATION AT THE PATIENT'S BEDSIDE

Especially for private patients, you can only bill for what is documented, and the best way to document treatment provided is right at the patient's hospital bed. Nurses sign off tasks performance quickly and easily and record vital signs. Wounds can be photographed and archived without additional equipment. Notes and tasks can be recorded on the doctor's rounds. Text modules enable meaningful treatment notes to be made in a few seconds. You will also impress the patient with how state-of-the-art and professional your documentation is – and enhance patient satisfaction and the hospital's reputation at the same time.

EASY, FAST AND SAFE

Safety and usability are our foremost considerations. Our developers collaborate closely with customers to ensure that our easy-to-use apps are a perfect match for the users' needs. The apps can be integrated into your existing processes without requiring all that much training and will speed them up perceptibly. The newly acquired mobility will save you time and money. Dictation, for example, no longer requires additional equipment and can be sent straight to the typing pool. With iMedOne® Mobile your staff can save superfluous time they might otherwise spend on documentation and invest it instead in their key task: treating patients.
